

Addigy Quick Start Guide

Follow these steps to quickly configure your Addigy instance.

Step 1

Configure MDM for your environment

Apple Push Certificates and MDM

The first step to configuring your Addigy instance is to Create Apple Push Certificates and build MDM Enrollment Profiles. With Apple Push Certificates you will be able to enroll your devices in the Apple MDM Framework and fully manage your Apple devices.

Step 2

Create a Policy

Building Policies

Policies are the core framework in Addigy and allow administrators to manage groups of machines. Policies allow for easy management of several features for multiple Apple Devices including:

- Software
- MDM Configuration Profiles
- System Updates
- Microsoft Office Updates
- And More

Step 3

Integrate Apple Business Manager and Addigy

Automated Device Enrollment

Configuring the Automated Device Enrollment integration will allow you to quickly provision new devices purchased through your Apple Business Manager account. By utilizing this integration machines can be quickly set up and enrolled into Addigy automatically.

Apps and Books

The Apps and Books integration allows you to deploy App Store content purchased through an Apple Business Manager account to your Addigy enrolled Apple devices.

Step 4

Enroll Devices

Enrolling Apple Devices

Now that you have a policy configured with an Apple Push Certificate you can begin enrolling devices. You can leverage Automated Device Enrollment to set up new machines right out of the box, or manually enroll a device using the MDM Enrollment Link in the Add Devices page.
