

Work from home using Addigy

No other MDM makes working from home easier for Apple administrators in the enterprise.

Modernize the technology you use

- Global cloud infrastructure you can monitor - <https://status.addigy.com>
- Eliminate on premise software limitations and embrace SaaS - <https://releases.addigy.com>
- MDM and a powerful Mac agent for managing macOS, iOS, iPadOS, and tvOS
- Deprecate software distribution points
- Built for the Apple Ecosystem

Features you need

- Secure devices and encrypt data
- Self-Service for user empowerment and advanced service delivery
- SSO using Azure or Okta
- Smart Software for applying PPC profiles before deployment
- MDM live will let you know if an iOS device is online
- Community written scripts and device facts vetted by Addigy
- Remotely monitor and remediate issues
- Software metering to help determine everyone is on task
- Run speed tests on your employees home networks

Services

- Online Addigy Academy to train administrators on advanced features, at your own pace
- Addigy instructor lead courses held remote
- Unlimited support
- Onboarding and migration services available but not mandatory
- 14 day trials are instantly available at www.addigy.com/signup

PopSockets at home using Addigy

No other MDM is truly SaaS and has enterprise features.

The Company

PopSockets was Inc. 5000's second fastest growing company in the USA and has increased sales by 71,424% over the last three years. Today, this Colorado-based company has over 300 global employees in Boulder, San Francisco, Shanghai, Japan and Finland.

The Ecosystem

- 50% on Catalina, still managing the migration
- Using Azure AD, pure cloud
- Doesn't use distribution points
- Uses an Addigy MSP for support in California, met them in an Addigy training and the MacAdmin slack
- Works with an Apple team in California and buys from their partners

New Culture

- IT was able to enforce a standard device state across all Macs in one policy
- Users no longer felt like IT was watching them, on the contrary, users wanted IT to watch more closely and have remote access to their device
- Self healing policies make enforcement easy
- Tickets have gone down as IT has been making more remote changes using Live Terminal sessions

Remote Support

- Went to the Addigy MacAdmin slack and a power user gave PopSockets IT a script to run local network speed tests. This allowed IT to determine speed wasn't a device issue
- Recovery of lost and stolen devices has been incredibly easy as all users left the office
- Live Desktop using Apple Remote Desktop was launched at the perfect time as users moved home and a streamlined remote control method became necessary vs a nice to have

"No other tool on the market for managing Apple devices makes working from home easier"
— Tucker Smith, Manager - IT Systems and Networks
