

Addigy in HealthCare

Apple devices are transforming the bedside experience and iPads at the center of the equation. Healthcare providers are constantly innovating new ways to communicate, educate and entertain patients. So the need for device management has never been greater.

Addigy can help healthcare organizations remotely enroll, deploy and manage iPads, Macs and Apple TVs enabling patients, nurses, doctors and IT support staff to:

- Interact with their caregivers and loved ones via an iPad.
- Use apps for entertainment and patient care.
- Monitor iPad health and location if lost.
- Determine if an iPad is online to receive commands using MDM Live.

Compliance

Addigy allows you to set security policies and monitor the health of your environment. Generate reports to demonstrate compliance with security standards (such as HIPAA). An ability that helps mitigate regulatory compliance risks while streamlining audits. <https://addigy.com/security/>

Remote Management

Continuous management of all your devices is easy with configuration profiles, policies and monitors. With the ability to automate these tasks remotely, you stay current, in compliance and secure.

Zero-Touch Deployment

Addigy integrates with Apple Business Manager and Apple School Manager so you can automatically enroll and configure new iPads, Macs and Apple TVs remotely. Get hundreds of devices configured, managed and deployed in minutes.

Case Study

During Covid-19 a well known healthcare organization in Southern California needed a way to configure and deploy iPads quickly to patients to save on PPE. Addigy not only trained their staff on best practices using Apple devices but we were able to help them configure and meet the needs of patients in less than 24 hours after making their purchase.
